Education

University of Nebraska Omaha (B.S. in CompSci & Artificial Intelligence, 3.73 GPA)

Aug 2024 - May 2028

Skills, Technologies, and Awards

Skills: Python, Flask, Typescript, JavaScript, React, HTML/CSS, TailwindCSS, Swift

Technologies: PostgreSQL, Supabase/Firebase, Railway, Google Cloud Platform, Docker, Git/Github

Awards and Certs: Walter Scott Scott Scholar Recipient, Masters in TFT (Top 1.4% of 1M players)

Experience

Chief Technology Officer – Blueprints of Pangaea Omaha Chapter

December 2025 - Current

- Led technology direction for a nonprofit chapter dedicated to redistributing unused medical supplies to underserved communities, translating humanitarian operational needs into reliable software infrastructure
- Scoped and oversaw development of a full-stack inventory management system to replace a fragile Google Sheets workflow, giving the organization a proper foundation for tracking and managing medical supply logistics (see Projects)
- Served as the primary technical decision-maker across stack selection, architecture, and tooling, bridging the gap between non-technical team members and the medical supply redistribution mission

Los Alamos National Laboratory x UNO, Software Engineer Intern

June 2025- Aug 2025

- Developed a Flask web application with a real-time damage confirmation interface, streamlining the manual verification process for nuclear safety compliance requirements
- Designed and implemented a PostgreSQL database schema with automated image routing logic, directing damage-positive classifications to priority review queues for quality assurance workflows
- Built front-end review interface using HTML and CSS, enabling efficient manual confirmation of flagged nuclear waste barrel images while working under Agile Methodology
- Researched YOLO object detection models to learn classification pipelines for potential integration with damage detection workflow

University of Nebraska Omaha, Lead IT Consultant (Part Time)

Jan 2025 - Present

- Providing frontline technical support to students and faculty
- Designing and conducting training sessions for student workers on classroom and teaching-related technologies
- Supervising a team of student workers within CBA Operations

University of Nebraska Omaha, Python Grader (Part Time)

Jan 2025 - Present

- Evaluating student programming assignments using standardized rubrics and providing technical feedback
- Managing high-volume assessment workflows while meeting strict deadlines

University of Nebraska Omaha, Cybersecurity Research Intern (Part Time)

June 2022 - July 2022

- Researched internet patterns in students K-6 and cybersecurity vulnerabilities on children's websites
- Presented finds to UNO Shareholders through presentation and live-demo

Technical Projects

Inventory Management System (github)

August 2025 - Present

- Built a full-stack medical supplies inventory web app in React, TypeScript, and Vite, using Supabase (Postgres + Auth + Storage) as the backend and Tailwind with shadcn/ui for the interface.
- Designed the inventory system with searchable/filterable tables, item detail and edit modals, image uploads to Supabase Storage, and separate tabs for active, archived, and donated items, including expiration-date tracking and lot/pallet metadata.
- Implemented Supabase email authentication with protected routes and a role-based access layer (admin, volunteer, visitor), plus an admin console for listing users and assigning roles via a custom Postgres RPC.

Nbadle (NBAdle.net)

- Designed a seeded daily-puzzle system so all users get the same player each day without a backend.
- Implemented a multi-attribute comparison engine with partial-match logic cross-referencing player career history.
